FAHIM CHOWDHURY

SOFTWARE DEVELOPER

ABOUT ME

I want to develop myself to have the highest level of skills and development and respected abilities in the light competition for developing societies. My goal is to join a reliable and developing organization to solve various problems, be able to do human development for the people, and create new technologies to solve environment problems in a respectful and managerial environment. In addition, I will try my best to find a solution of the problem. I am looking for a fully supportive and capable organization to support and enable me to compcritical and selfless work for my development and skill development.

PROJECTS

BLOSSOMCART

Blossom Cart is a Django-based flower-selling platform offering a seamless shopping experience. Users can browse a variety of flowers, make deposits, and track orders. The admin dashboard allows efficient management of orders, inventory, and flower listings, ensuring smooth operations for both users and administrators.

WANDERSTAY

WanderStay is a hotel booking platform that offers users the ability to manage profiles, view booking history, and explore trending hotels. Admins can handle hotel management, customer details, and reviews. The platform combines user-friendly design with robust backend features, ensuring a seamless booking experience for both users and administrators.

CITY LIBRARY

City-Library is a web application built with Django and a modern frontend stack (HTML, CSS, Bootstrap) that allows users to create accounts, log in/out, manage their profiles, browse available books, deposit money, and view their borrowed book history. It's a convenient platform for users to access and manage their library activities online.
